

The **banks**, seen from their data centers

They rate governments, companies, households. We rated the ground your money runs on.

GROUPS

The sector that rates everyone had never been rated on the ground

Banks spend their lives rating: governments, companies, households. We turned the grid around: their data centers — the buildings where your accounts and payments run — rated exactly like the 1259 other sites of the European corpus. Ten sites, seven household names.

And here is the episode's riddle. This is **the best-documented sector in the corpus**: 0.77 median documentation — above Big Tech. A power figure is on file for 8 sites of 10 — at Big Tech, it is 1 of 18. Everything is published, readable. And yet: in France, of seven rated sites, none gets past C.

Three suspects — opacity, water, the grid. We questioned them. And this time, unlike the Big Tech episode, one of the three will not walk free.
